# **Assignment 4: Disjoint sets**

- 1. Perform the following operations on disjoint set:
  - a. Make-set
  - b. Union
  - c. Find-set
- 2. Perform the Union by-element\_value (weight) operations on 10 elements (0-9, each initially in their own set). Draw the forest of trees that result U(1,5); U(3,7); U(1,4); U(5,7); U(0,8); U(6,9); U(3,9).
- 3. Perform union-by-rank for disjoint sets.
- 4. Perform path compression in tree-based disjoint sets. Verify using Find-set operation.
- 5. Find out the number of connected component in a given undirected graph and display their representative. You are free to choose representative in a given set. Vertices are numbered from 1 to V.

6. Check whether given graph is connected or not using disjoint sets.

# Input: (T, |V<sub>i</sub>|, Adj<sub>i</sub>)

### **Output:**

Disconnected Connected

7. Detect cycle in a given undirected graph (adjacency matrix) using disjoint set operations.

### Input: $(T, |V_i|, Adj_i)$

#### **Output:**

Yes No
